*This report shows the last test case execution result for each build, analizing test cases **with and without tester assignment**.*

Example:
Test Case has been executed in this order:
Build 1.0 - Passed; Build 1.0 - Failed
-> Last Result for Build 1.0 is Failed because second execution overrides older results.

*"[Latest (created) Build]" and "Latest execution" column show data according to this **example**:*
Test Case has been executed in this order:
Build 1.0 - Passed; Build 1.0 - Failed; Build 2.0 - Blocked; Build 1.0 - Passed
-> [Latest (created) Build] : Blocked because Build 2.0 is the last build created for which a result has been set.
-> "Latest Execution" : Passed because Build 1.0 has been executed at last.

The shown priority is calculated based on the importance of the currently linked test case version.
